

Technical Case Study

IT Infrastructure Planning and Implementation

Need

V-CC Systems Inc. (V-CC) the leader in the software-as-a-service health care industry, required a scalable, secure IT backbone. High performance, security and uptime were top priorities required to the company's continued and thriving growth.

Solution

D-Tech Consulting first provided V-CC with a full audit and implementation plan. Servers were added to the current server farm and all existing servers were provided with the latest software and enhancements and all elements of V-CC's server farms (in-house and co-location) received leading edge hardware upgrades. Sonicwall firewalls were installed to provide interoffice connectivity and a regimented maintenance schedule that ensured maximum uptime and security was implemented for all servers located in V-CC's secure data centre.

Result

V-CC experienced an immediate increase in performance on all servers and increased confidence for successful growth. Their software-as-a-service clients benefit from highly available and fast IT environment.

Technologies Used

Customized Servers | Dell Poweredge Servers | Customized Firewalls | Exchange Server 2003 | Dell PERC Raid Controllers | Symantec Backup Exec | Symantec Antivirus Corporate Edition | Symantec BrightMail Anti-Spam | Visual Source Safe | Site-Site VPN
